Colerain Township Fire Dept.

May 2015

AirPrime Retrofit

*In May of 2015* the Colerain Township FD (Ross County, Ohio) retrofitted a Trident Automatic Air Primer on our 2000 Kenworth/Pierce pumper equipped with at 1250-gpm single stage pump.

The local Pierce service shop completed the retrofit.

We use the single lane folding tank water supply set-up (using 1 to 4 inline tanks) and draft from each side of the pumper using two butterfly valves. We carry 4-10' lengths of 6" suction hose, placing multiple folding tanks in front and rear of the pumper.

With the Trident Automatic Air Primer (the switch in the AUTO position all the time) using folding tanks or from a high static lift, we easily establish prime without even the slightest hesitation. It's nearly as simple as receiving water under pressure from a hydrant.

The fire department will soon be retrofitting a Trident Automatic Air Primer on our newer Firovac vacuum tanker equipped with a 1000-gpm pump.

*The Trident Automatic Air Primer is a game changer in rural water supply!*
